

Create a Data File that contains No Missing Data in Selected Variables

To remove all cases that have missing data in a list of selected variables, see the following:

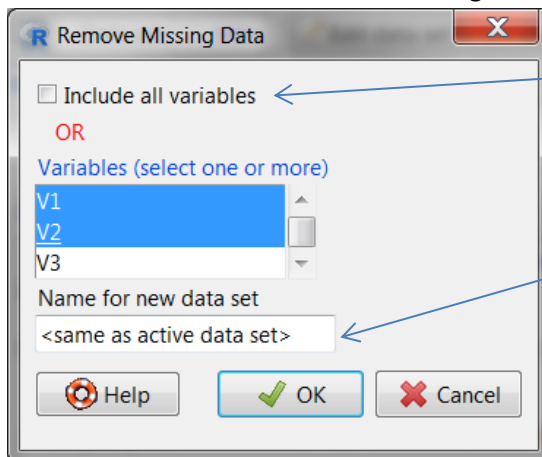

Step 1: Go through the following menu selections.

Data => Active data set => Remove cases with missing data ...

Step 2: Perform the followings for the Remove Missing Data dialog window:

1. Unchecked the "Include all variables" box, and
2. select the variables used (press and hold control key and click the variables) for removing missing data cases, and then
3. enter the new data set name for storing the new data file.

Uncheck this box!

Put the name of the new data file here!
